

ROCK FILLED WELDED WIRE BASKET RETAINING WALL REPAIR

Lowe's Home Improvement
Bullhead City, AZ

PROJECT FACTS

Wall Area = 1746 SF
Max Ht. = 9 FT
Completed 2014

CHALLENGE

The top portion of the existing retaining wall at the site of a large retailer was beginning to fail, causing substantial cracking of the asphalt and foundation of the store.

SOLUTION

Pinnacle Design/Build's experienced construction crews and management team worked with the developer to construct a 10 foot tall, 1,748 square foot Rock Filled Welded Wire Basket Retaining Wall to support the store.

VALUE

The bottom half of the existing retaining wall was still functional. Pinnacle's construction crew was able to build on top of the existing wall to replace the failing portion of the wall, saving the developer time and money on the repair.
